A-ISOMETER® IR470LY...

Insulation monitoring device for unearthed AC and 3(N)AC systems (IT systems)

IR470LY

Device features

- Insulation monitoring for unearthed IT AC / 3(N)AC systems 0…793 V
- Nominal voltage extendable via coupling device
- Response values, adjustable 1…200 kΩ
- Connection monitoring system / earth
- Power ON LED, Alarm LED for signalling AC, L+, L- insulation faults
- LED bar graph indicator for signalling AC, L+, L- insulation faults
- Connection for kΩ indication
- Combined test and reset button
- Connection external test / reset button
- Alarm relay with two potential-free changeover contacts
- N/O or N/C operation, selectable
- Fault memory behaviour, selectable

Standards, approvals and certifications

Product description

The A-ISOMETER®s of the IR470LY series monitor the insulation resistance of unearthed AC and three-phase systems (IT systems) AC / 3(N)AC 0…793 V. In combination with a coupling device, the devices can also be used for higher voltages. An external supply voltage allows de-energised systems to be monitored too.

The systems to be monitored should not contain DC components. Due to the measuring method, insulation faults downstream of directly connected rectifiers are indicated with increased response sensitivity. The set response values apply to the pure AC system only.

Application

AC/3(N)AC main circuits (without directly connected rectifiers), such as motors, pumps, rolling mills without variable-speed drives, air cooling and air conditioning systems, lighting systems, heating systems, mobile generators, building services, domestic electrical installation practice, etc.

Function

When the insulation resistance between the system conductors and earth falls below the set response value, the alarm relay switches and the alarm LEDs light up. In case of interruption of the system and earth connection, the alarm LEDs flash. Different alarm LEDs AC, DC+, DC- allow to distinguish between insulation faults on the AC and the DC side. The measured value is indicated by the LED bar graph indicator or a measuring instrument that can be connected externally. In this way any changes, for example when circuits are connected to the system, can be recognised easily. The fault message can be stored. The fault memory can be reset by pressing the reset button. The device function can be tested using the test button.

Measurement method

DC

Superimposed DC voltage with inverter.

Standards

The IR470LY series complies with the requirements of the device standards: IEC 61557-8, ASTM F1669M-96 (2007).

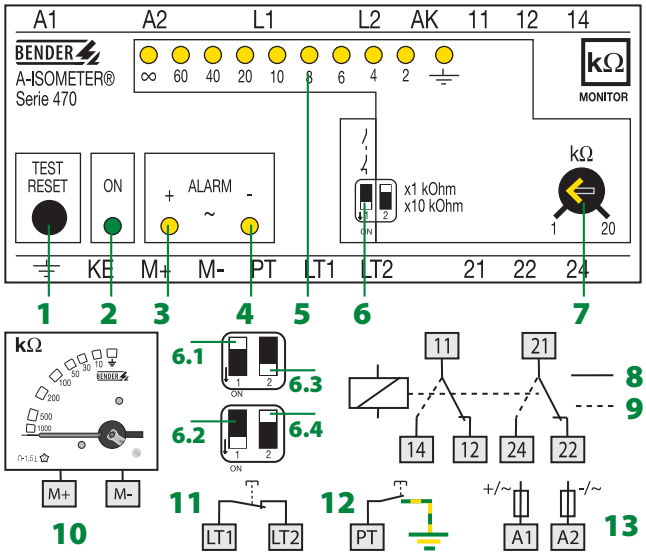
Wiring diagram – Front plate and system connection



1 - Combined test/reset button "TEST/RESET"; short-time pressing (< 1 s) = RESET, long-time pressing (> 1 s) = TEST
2 - LED Power "ON"
3, 4 - Alarm LEDs "+ ALARM -", yellow, light when the value falls below the set response value and flash in case of interruption of the connecting leads E / KE or L1 / L2
5 - LED bar graph indicator
6 - Operating principle of the alarm relays and setting range R_{ALARM}
6.1 - N/O operation
6.2 - N/C operation
6.3 - x 10 kΩ
6.4 - x 1 kΩ
Changing the setting range from x 1 kΩ to x 10 kΩ automatically changes the indication of the kΩ values on the LED bar graph indicator: Setting range x 1 kΩ: Meter scale point x 1 kΩ. Setting range: x 10 kΩ: Meter scale point has to be multiplied by 10 kΩ.
7 - Potentiometer to set the response value R_{ALARM}
8 - Alarm relay - N/O operation (basic setting)
9 - Alarm relay - N/C operation
10 - External kΩ indicating instrument
11 - External reset button "LT1, LT2" or bridge for fault memory
12 - External test button "PT"
